Mappa di rischio di Infezione Potenziale per il 14/06/2021

La mappa mostra quanto le condizioni meteorologiche giornaliere siano favorevoli ad eventi di infezione da brusone. Le stime sono effettuae a partire da simulazioni condotte con il modello di simulazione *WARM* per il periodo 11/06/2021 - 17/06/2021. Per ciascun comune, il rischio riportato é la media dei valori stimati su celle 2×2km all'interno del comune.

Il valore di *Rischio Medio* corrisponde alla media stimata in un intervallo di ±3 giorni rispetto alla data corrente.

Andamento per comune dal 11/06/2021 al 17/06/2021

Per ciascun comune dell'area risicola lombarda viene riportato il rischio aggregato stimato per la settimana, insieme all'andamento del rischio stimato nel periodo di ±3 giorni dalla data corrente. I grafici illustrano l'andamento giornaliero del *Rischio Stimato*.

Si tenga presente che le stime per i giorni futuri sono basate su previsioni meteorologiche, inevitabilmente soggette ad un margine d'errore.
